The pesticide report in the following pages provides an exhaustive list of pesticide molecules tested to assess risk for your consumption. Being fair to our promise of bringing wholesome and fresh food to your table we test every lot of spices (mentioned in the report) being used to make this Red Chilli Powder.

The reports contain the exact levels of pesticide molecules detected in each ingredient. These are mentioned under the result column against each molecule. Wherever detected, the levels are mentioned to the last 't'.

Pesticides continue to be a part of farming exercises. Various scientific studies estimate 35-40% of crop loss is due to pest attacks on food crops every year, [Click here for report](#). Therefore, usage continues to remain rampant. In many cases pesticides have also seeped into our ground water. Even when a farmer doesn't apply pesticides, they can still seep into the food from the water used to grow it!

For various pesticide molecules Indian National Food Safety Governing body has provided limits of pesticide levels fit for consumption for these spices. Some of these include - Acetamiprid, Azoxystrobin, Fipronil etc. [Click here for a comprehensive list of these molecules](#).

For several other pesticide molecules, they continue to work towards technically defining the safety limits. While these are under the lens, it is important for us to assess their risk for you. For these pesticide molecules, we test them against strict EU guidelines to ensure that these are fit for your consumption. [Click here for limits defined under these guidelines](#).

Through our backward integration program, we work together with over 3,000+ spice farmers and farmer organizations across the country to closely guide and monitor pesticide usage in crops. This helps us to ensure a healthier product for you and your family.
